

Dear Hiring Manager,

I am writing to express my strong interest in the Full Stack Developer position (Ref: 33002). With over 10 years of hands-on experience building and scaling SaaS platforms end-to-end, I bring a well-rounded technical foundation across the exact stack your team works with — Ruby on Rails on the backend, modern JavaScript frameworks on the frontend, and the infrastructure know-how to ship reliable, performant software in production.

Throughout my career at organizations like Onclusive India, Reflektive Labs, and L&T; Technology Services, I have owned features from initial UI design through backend API development, database optimization, and deployment — not just contributing code, but driving decisions that align engineering effort with real product outcomes. At Reflektive Labs, I worked extensively with Rails, MySQL, and Elasticsearch to build scalable data-heavy features, while also contributing meaningful frontend work in React and EmberJS. I am equally comfortable writing clean RSpec test suites, optimizing slow queries, or refining a SASS-driven UI to pixel perfection.

What I value most in an engineering role is genuine ownership — the ability to trace a problem from a user's experience all the way down to the database and fix it at the right layer. I have also had the privilege of mentoring junior developers and helping teams build habits around code quality and thoughtful system design, which I consider just as important as the technical work itself.

I would welcome the opportunity to learn more about the team and the problems you are working to solve. I am confident my experience building production SaaS systems across this exact stack makes me a strong fit, and I am excited by the prospect of contributing from day one.

Thank you for your time and consideration.

Sincerely,
[Your Name]
