

Dear Hiring Manager,

I am writing to express my strong interest in the Lead Ruby on Rails Engineer position. With over 10 years of hands-on experience building and scaling full-stack SaaS platforms, I bring deep expertise in Ruby on Rails alongside a well-rounded command of frontend technologies — and I'm genuinely excited about the opportunity to contribute at a lead level.

Throughout my career at organizations like Onclusive, Reflektive, and L&T; Technology Services, I've owned features end-to-end — from crafting intuitive UI components in EmberJS and React to architecting backend APIs, optimizing complex MySQL and PostgreSQL queries, and shipping to production with confidence. At Onclusive, I worked extensively with Rails and Elasticsearch to power media intelligence features used at scale, ensuring both performance and reliability. At Reflektive, I contributed to a performance management SaaS platform where clean, testable code using RSpec wasn't optional — it was foundational to how the team operated.

What I enjoy most about working at a lead level is the combination of deep technical work and collaborative problem-solving. I've mentored engineers, led technical discussions that bridge product goals with engineering decisions, and helped teams move faster without accumulating debt. I believe great engineering leadership means being hands-on enough to earn trust and strategic enough to shape direction.

I would welcome the opportunity to bring this experience to your team. Thank you for considering my application — I'd love to discuss how my background aligns with what you're building.

Sincerely,
[Your Name]
