

I notice the job description field appears to be empty — only the role title ("Remote Senior Software Engineer – LLM Evaluation") and the candidate profile were provided. I'll write the best cover letter I can based on the role title and the candidate's background, but please note it would be significantly stronger if you share the actual job description. Here's what I can craft:

Dear Hiring Manager,

I'm excited to apply for the Remote Senior Software Engineer – LLM Evaluation role. With over 10 years of experience building and scaling full-stack SaaS platforms, I've spent my career at the intersection of robust backend engineering and thoughtful product delivery — and I'm genuinely energized by the growing space of LLM evaluation, where engineering rigor directly shapes how AI systems are understood and improved.

In my work at STG Labs / Onclusive India and Reflektive Labs, I owned features end-to-end — from data modeling in MySQL and Elasticsearch-powered search pipelines to clean, performant frontends in React and EmberJS. At Reflektive, I contributed to a performance management platform serving thousands of users, where I built and optimized APIs in Ruby on Rails while ensuring reliability through comprehensive RSpec test coverage. At Onclusive, I worked on media intelligence tooling where data quality and system accuracy were business-critical — experience that maps naturally to the evaluation mindset required when working with LLM outputs.

As a Tech Lead at L&T; Technology Services, I mentored engineers, drove architectural decisions, and bridged the gap between product goals and engineering execution. I know how to move fast without cutting corners, and I take genuine ownership of the systems I build — not just the happy path, but edge cases, failure modes, and long-term maintainability.

I'd love to learn more about the specific evaluation challenges your team is tackling and share how my background could contribute. Thank you for your time and consideration — I look forward to the possibility of connecting.

Sincerely,
[Your Name]
