

Dear Hiring Manager,

I am writing to express my strong interest in the Ruby on Rails Developer role. With over 10 years of full-stack engineering experience building and scaling SaaS platforms, I have spent the majority of my career living inside Rails codebases — writing clean, testable Ruby, optimizing database performance, and shipping features that users actually rely on every day.

At Onclusive India (formerly STG Labs), I worked as a Senior Software Engineer owning features across the full stack — from backend APIs and Elasticsearch integrations to EmberJS and React frontends. I have hands-on experience with the complete Rails lifecycle: designing MySQL and PostgreSQL schemas, writing thorough RSpec test suites, and pushing to production with confidence. At Reflektive Labs, I deepened my backend expertise while contributing to a performance management SaaS product, where query optimization and API reliability were constant priorities. These experiences have made me genuinely comfortable operating at the intersection of backend architecture, frontend delivery, and cross-team collaboration.

What I bring beyond the technical fundamentals is the ability to move independently. Whether that means untangling a gnarly legacy Rails controller, aligning with a product manager on scope, or mentoring a junior engineer through their first API integration, I am used to taking ownership rather than waiting to be pointed at a task. Remote work suits how I naturally operate — I communicate proactively, document decisions, and ship without needing close supervision.

I would love the opportunity to bring this experience to your team and contribute to building something meaningful. Thank you for your time and consideration — I look forward to hearing from you.

Sincerely,
[Your Name]
