

Dear Hiring Team at YO IT Consulting,

I'm excited to apply for the Ruby on Rails Developer role. With over 10 years of hands-on experience building and scaling full-stack SaaS platforms, I've spent my career doing exactly the kind of end-to-end engineering work your candidate profile describes — from crafting responsive frontends to architecting robust backend systems and getting them shipped to production.

At STG Labs / Onclusive India, I worked as a Senior Software Engineer building data-intensive features across Rails backends and EmberJS/React frontends, working closely with Elasticsearch and MySQL to optimize performance at scale. At Reflektive Labs, I contributed as an SDE II to a people management SaaS platform, owning features across the full stack and writing thorough RSpec test suites to keep the codebase reliable. These experiences gave me a deep appreciation for writing clean, maintainable code that other engineers actually enjoy working with — not just code that ships.

Beyond individual contribution, my time as Tech Lead at L&T; Technology Services sharpened my ability to align engineering decisions with product goals, mentor developers, and keep teams moving without sacrificing quality. I know what it means to be the person others look to when something breaks in production at an inconvenient hour — and I take that responsibility seriously.

I'd love the opportunity to bring this experience to your team and contribute from day one. Thank you for considering my application, and I look forward to the conversation.

Warm regards,
[Your Name]
