

Dear Hiring Manager,

I am writing to express my strong interest in the Senior Full Stack Engineer role focused on Ruby on Rails and ReactJS. With over a decade of hands-on experience building and scaling full-stack SaaS platforms, I bring deep technical expertise across the exact stack you are looking for — from Rails APIs and MySQL data layers to modern JavaScript frontends — along with a track record of leading teams and delivering production-ready features end to end.

During my time at STG Labs / Onclusive India, I owned the full lifecycle of complex features across backend services and frontend applications, working extensively with Ruby on Rails, Elasticsearch, and JavaScript to power media intelligence products used at enterprise scale. At Reflektive Labs, I contributed as SDE II to a performance management SaaS platform, building robust APIs with RSpec-tested Rails backends and responsive UIs using modern JavaScript and CSS — always keeping an eye on performance, maintainability, and developer experience. In my Tech Lead capacity at L&T; Technology Services, I bridged the gap between engineering decisions and product goals, mentoring junior engineers while staying deeply hands-on with code.

What drives me is the satisfaction of solving hard problems across the full stack — whether that means optimizing a slow database query, designing a clean React component architecture, or refactoring a Rails service to handle scale gracefully. I am equally comfortable pairing with a junior developer on a tricky bug as I am in a product meeting debating technical tradeoffs.

I would love the opportunity to bring this experience to your team and contribute from day one. Thank you for your time and consideration — I look forward to the conversation.

Sincerely,
[Your Name]
