

I notice the company name wasn't provided, so I'll write this with a placeholder you can easily swap out. Here's the cover letter:

Dear Hiring Manager,

I'm excited to apply for the Senior Full Stack Software Engineer role. With over 10 years of hands-on experience building and scaling SaaS platforms end-to-end, I've spent my career doing exactly what this role demands: owning features from the first line of code to production deployment, across both frontend and backend. My experience at Onclusive India, Reflektive Labs, and L&T; Technology Services has given me deep fluency in the kind of full-stack environment you're describing — Ruby on Rails on the backend, modern JavaScript on the frontend, and the judgment to make the right architectural calls in between.

At Onclusive India (STG Labs), I worked extensively with Ruby on Rails, Elasticsearch, and MySQL to build and optimize backend systems handling significant data at scale, while also contributing to frontend interfaces in modern JavaScript. At Reflektive Labs, I built and maintained features across the full stack for a performance management SaaS product, sharpening my ability to translate product requirements into clean, testable code — backed by thorough RSpec coverage. These roles taught me that great full-stack engineers don't just write code in isolation; they understand the product, ask the right questions, and ship things that actually move the needle.

Beyond the technical work, I've naturally grown into a mentorship and technical leadership capacity — whether formally as a Tech Lead at L&T; Technology Services or informally by guiding junior engineers through code reviews, architecture decisions, and debugging sessions. I believe engineering decisions should always connect back to product and business goals, and I try to bring that mindset into every sprint and every pull request.

I'd welcome the opportunity to talk more about how my background aligns with what your team is building. Thank you for your time and consideration.

Sincerely,
[Your Name]
