

Dear Hiring Manager,

I'm excited to apply for the Senior Software Engineer role. With over 10 years of experience building and scaling full-stack SaaS platforms, I've spent my career doing exactly what this role calls for — owning features end-to-end, from database design and backend APIs through to polished frontend experiences, while keeping teams aligned and moving forward.

At STG Labs / Onclusive India, I worked extensively with Ruby on Rails, MySQL, and Elasticsearch on backend systems that needed to be both reliable and fast, while contributing to frontend applications built with modern JavaScript. I've written test suites with RSpec that gave teams genuine confidence in deployments, optimized queries that meaningfully reduced load times, and shipped features that touched every layer of the stack. At Reflektive Labs, I deepened my frontend skills and learned to balance product velocity with engineering quality — a tension I've gotten comfortable navigating at every company since.

What I bring beyond technical range is the experience of having sat in a Tech Lead seat at L&T; Technology Services, where I learned that good engineering decisions aren't made in isolation. I've mentored junior engineers, participated in architecture discussions that shaped product direction, and advocated for pragmatic choices that serve both the users and the team maintaining the code.

I'd love to bring that combination of hands-on technical depth and collaborative engineering mindset to your team. I'm confident I can contribute meaningfully from day one and grow into the staff-level impact you're looking for. Thank you for your time and consideration — I'd welcome the chance to talk further.

Sincerely,
[Your Name]
