

I notice the company name and full job description weren't included in your submission, so I'll write a strong, adaptable cover letter based on the candidate profile and role title. You can swap in the specific company name and any role-specific details before sending.

Dear Hiring Manager,

I'm excited to apply for the Software Engineer, Merchant Tooling role. With over 10 years of full-stack engineering experience building and scaling SaaS platforms, I've spent my career doing exactly the kind of work this role demands — owning features end-to-end, from database schema and API design through to the UI that real users interact with every day. The merchant tooling space sits at the intersection of engineering rigor and direct business impact, and that's where I do my best work.

At STG Labs / Onclusive India, I led development across Ruby on Rails backends and modern JavaScript frontends, building systems that handled significant data volume using Elasticsearch and MySQL. I drove performance optimization initiatives that meaningfully reduced query latency and improved reliability at scale. At Reflektive Labs, I took ownership of full product features as an SDE II — writing clean, well-tested Rails code with RSpec, collaborating closely with product and design, and shipping to production with confidence. These weren't handoff-heavy environments; I was hands-on at every layer.

What draws me specifically to merchant tooling is the tangible feedback loop. When the tools you build work well, merchants move faster and grow their businesses — that visibility keeps engineering decisions grounded and purposeful. I've also spent time in Tech Lead capacity at L&T; Technology Services, mentoring engineers and helping teams align technical decisions with product goals, so I understand how to contribute beyond just the code.

I'd love the opportunity to bring this experience to your team and dig into the real challenges merchants face through the tools we build together. Thank you for your time and consideration.

Sincerely,
[Your Name]
