

Dear Hiring Manager,

I am writing to express my interest in the Software Engineer role at your organization. With over 10 years of hands-on experience building and scaling full-stack SaaS platforms, I bring a track record of owning features end-to-end — from thoughtful UI design through robust backend APIs and into production — while keeping engineering decisions tightly aligned with business and product goals.

Throughout my career at companies like Onclusive India (STG Labs), Reflektive Labs, and L&T; Technology Services, I have worked extensively with Ruby on Rails, MySQL, and Elasticsearch on the backend, paired with EmberJS, React, and modern JavaScript on the frontend. At Reflektive, I contributed to a performance management SaaS platform serving enterprise clients, where I improved API response times and helped streamline key user workflows. As a Tech Lead at L&T; Technology Services, I mentored junior engineers, established coding standards, and drove architectural decisions that improved system reliability and delivery velocity across the team.

What I enjoy most about full-stack engineering is the ability to see the full picture — understanding how a database query ultimately affects what a user experiences on screen, and optimizing across that entire chain. I write clean, well-tested code using RSpec and take pride in leaving codebases easier to work with than I found them.

I would welcome the opportunity to bring this depth of experience to your engineering team. I am confident I can contribute meaningfully from day one while continuing to grow alongside the work. Thank you for considering my application — I look forward to the possibility of connecting.

Sincerely,
[Your Name]
