

Dear Hiring Manager,

I am writing to express my strong interest in the Senior Fullstack Software Engineer role within your Fintech and Insurance division. With over 10 years of experience building and scaling end-to-end SaaS platforms, and a track record spanning companies like Onclusive India, L&T; Technology Services, and Reflektive Labs, I am confident that my technical depth and product-focused engineering approach align closely with what your team is looking for.

Throughout my career, I have owned features from conception to production — designing intuitive frontend experiences with React and EmberJS while architecting robust backend systems with Ruby on Rails, MySQL, and Elasticsearch. At Onclusive India, I worked as a Senior Software Engineer delivering full-stack capabilities on a media analytics SaaS platform at scale, optimizing query performance and shipping reliable APIs consumed by thousands of users. Earlier, as Tech Lead at L&T; Technology Services, I drove engineering decisions that balanced technical rigor with product timelines, while actively mentoring junior engineers and fostering a culture of code quality through practices like RSpec-driven testing.

What draws me specifically to this opportunity is the chance to apply that same full-stack ownership mindset within the fintech and insurance space — an industry where reliability, data integrity, and thoughtful UX genuinely matter. I thrive in environments where engineers are expected to think beyond tickets and contribute meaningfully to product direction, and the disruption-focused nature of this role excites me.

I would welcome the opportunity to discuss how my experience can contribute to your engineering team. Thank you for considering my application — I look forward to connecting.

Warm regards,
[Your Name]
