

Dear Hiring Manager,

I am excited to apply for the Senior Full Stack Engineer role focusing on Ruby on Rails and ReactJS. With over 10 years of hands-on experience building and scaling full-stack SaaS platforms, I bring deep expertise across the entire stack — from crafting intuitive React and EmberJS frontends to architecting robust Rails backends supported by MySQL, PostgreSQL, and Elasticsearch. This combination of breadth and depth is something I have honed across roles at Onclusive India, Reflektive Labs, and L&T; Technology Services, and it maps closely to what you are looking for.

At Onclusive India (STG Labs), I owned end-to-end feature development across complex SaaS products — designing RESTful APIs in Ruby on Rails, optimizing Elasticsearch queries for performance at scale, and delivering polished frontend experiences using modern JavaScript. At Reflektive Labs, I worked as part of a product-focused engineering team where shipping clean, well-tested code using RSpec was a baseline expectation, not an afterthought. These experiences have given me a strong sense of how to balance velocity with quality in fast-moving product environments.

Beyond individual contribution, I have consistently stepped into leadership responsibilities — mentoring junior engineers, driving technical decisions that align with product goals, and serving as a tech lead at L&T; Technology Services where I coordinated cross-functional engineering efforts. I understand that at the senior level, impact goes well beyond the code you write personally.

I would love the opportunity to bring this experience to your team and contribute to building something meaningful. Thank you for considering my application — I look forward to the conversation.

Sincerely,
[Your Name]
