

I notice the company name is missing from your application details. I'll write the cover letter with a placeholder — just swap in the actual company name before sending.

Dear Hiring Manager,

I'm excited to apply for the Senior Software Engineer (Rails) role at [Company]. With over 10 years of hands-on experience building and scaling full-stack SaaS platforms, I've spent my career doing exactly what this role calls for — owning features end-to-end, from database design and Rails APIs to the JavaScript and CSS that users actually touch. Ruby on Rails isn't just a line on my resume; it's the tool I've reached for consistently throughout my career to ship reliable, maintainable software at pace.

At STG Labs / Onclusive India, I worked across the full stack on a production SaaS product, building backend systems in Rails with MySQL and Elasticsearch while contributing to frontend experiences in EmberJS and React. I've written thorough RSpec test suites, optimized slow queries that were quietly hurting user experience, and navigated the kind of real-world production complexity that doesn't show up in tutorials. Earlier, in my Tech Lead role at L&T; Technology Services, I took ownership of engineering decisions and mentored junior developers — making sure the team was moving in the same direction as the product roadmap, not just shipping tickets.

What I bring beyond technical depth is the habit of thinking about why a feature matters before deciding how to build it. Whether I'm writing HAML templates, tuning a MySQL index, or reviewing a colleague's pull request, I try to keep the product goal in view. That's shaped how I approach both my own work and the conversations I have with teammates and stakeholders.

I'd love the chance to bring that approach to your team. Thank you for considering my application — I'm happy to talk through any of my experience in more detail.

Sincerely,
[Your Name]
