Re: iOS Developer - nooro

Nooro's mission to make pain management more accessible for seniors through technology is exactly the kind of meaningful, product-driven work that gets me excited ? and the iOS Developer role caught my attention immediately. Building a platform that directly improves quality of life for older adults, at a startup that moves fast and values bold decisions, is a compelling combination I want to be part of.

I'll be transparent: my 10+ years of professional experience is rooted in full-stack web engineering, with deep expertise in Ruby on Rails, React, and scalable backend systems. However, I have been building seriously in Swift and SwiftUI on iOS, and I bring the architectural instincts that make a strong iOS engineer ? not just a coder. My background owning features end-to-end, from Figma-driven UI implementation to RESTful API integration and production deployment, maps directly onto what you're looking for. I've worked extensively with MVVM patterns, dependency injection, clean modular code, and Git-based workflows with rigorous code review practices ? habits that translate cleanly into iOS development. At STG Labs and Reflektive, I consistently delivered pixel-accurate, performant interfaces while collaborating tightly with backend teams on API contracts and data handling, which mirrors exactly how you describe the cross-functional collaboration at nooro.

What I bring beyond the technical skill set is the staff-level perspective of someone who has shaped engineering practices, mentored teammates, and made architectural decisions that held up under scale. In a lean startup where you need someone who can own the iOS app, participate in architectural decisions, and help define how mobile development is done ? that kind of ownership mentality matters as much as syntax fluency.

I'd love the opportunity to walk you through my iOS work directly in a technical conversation. I'm ready to complete the questionnaire and any follow-on test, and I'm confident that a technical interview will make the case clearly.
