Re: Senior DevOps Engineer - Lemon.io

Lemon.io's model of matching engineers directly with high-growth startups ? cutting out the noise of client hunting and letting developers own real technical work ? is exactly the kind of environment where I've consistently delivered my best output. With over 10 years of hands-on experience building and shipping production SaaS platforms, I'm drawn to the Senior DevOps opening and the opportunity to contribute across the startup projects in your network.

While my roots are in full-stack engineering, infrastructure and deployment have been central to my work throughout my career. I've built and maintained CI/CD pipelines using GitHub Actions and Docker, managed production environments with a focus on reliability and observability through tools like AppSignal and New Relic, and used Terraform to provision and manage cloud infrastructure across multiple commercial projects. At STG Labs / Onclusive India, I've been deeply involved in architecting scalable, distributed backend systems ? working with Elasticsearch clusters, Redis, MySQL, and Sidekiq at production scale ? which gives me a strong foundation for the kind of infrastructure ownership your clients expect from a senior-level engineer. My familiarity with AWS and Kubernetes, combined with experience in Python and modern distributed system patterns, aligns directly with the AWS/GCP/SQL track requirements.

What sets me apart beyond the technical stack is that I've operated at a staff level ? leading technical decisions, mentoring engineers, and communicating complex architecture choices to stakeholders with varying technical backgrounds. Lemon.io's emphasis on direct client communication with no micromanagement suits how I naturally work: autonomously, with clear accountability and a bias toward building things right the first time. I'm also comfortable with async collaboration across time zones, having done so consistently in my current remote engagement.

I'd welcome the chance to discuss how my background maps to the specific projects you're currently staffing. I'm ready to move through your vetting process and am genuinely excited about the kind of high-impact startup work your platform offers.
