Re: Senior Full-stack React Developer - Lemon.io

Lemon.io's model of cutting out the client-hunting noise and connecting engineers directly with high-growth startups is exactly the kind of setup I've been looking for ? and the Senior Full-Stack React Developer role aligns closely with the work I've been doing at a staff level for the past decade. With 10+ years of end-to-end product engineering across SaaS platforms, I bring strong commercial depth in both React on the frontend and scalable backend systems, along with the startup-pace mentality your client projects demand.

At STG Labs / Onclusive India, I've owned full product features from UI through to production deployment ? building React-based interfaces backed by robust APIs, integrating Elasticsearch for real-time media intelligence search at scale, and optimizing MySQL query performance that meaningfully reduced latency across high-traffic pipelines. Earlier, as Tech Lead at L&T Technology Services, I led a team of engineers delivering a distributed SaaS platform, driving architectural decisions that improved system reliability and reduced deployment friction through CI/CD automation with GitHub Actions and Docker. These weren't incremental contributions ? they were ownership-level outcomes that moved product metrics.

My stack spans the full range your startup clients typically need: React and modern JavaScript on the frontend, Ruby on Rails and Python on the backend, AWS for cloud infrastructure, and Elasticsearch and Redis for performance-critical data layers. I'm also actively building familiarity with RAG pipelines and vector databases, which puts me in a strong position for the AI-adjacent projects increasingly common in the startup space. I work well async, communicate directly with technical stakeholders, and have no need for hand-holding ? which matches exactly how Lemon.io describes its client relationships.

I'd welcome the chance to go through your vetting process and be matched with a project where I can hit the ground running. I'm confident the fit will be clear once we talk through the details.
