Re: Senior Independent AI Engineer / Architect - A.Team

A.Team's model of embedding senior engineers directly into high-stakes missions ? rather than the usual contractor-client dynamic ? is exactly the kind of environment where I do my best work. I'm drawn to the network's focus on LLMs, RAG pipelines, and production AI systems, and I'm applying because my background building complex, distributed SaaS platforms puts me in a strong position to contribute from day one as a Senior AI Engineer and Architect.

Over the past three years at STG Labs / Onclusive India, I've owned the architecture of large-scale media intelligence systems where Elasticsearch powers real-time search and analytics across billions of indexed documents, and where performance isn't optional ? it's a product requirement. I reduced query latency by redesigning indexing strategies and query pipelines, directly improving the platform's core value proposition. Prior to that, as Tech Lead at L&T Technology Services, I led a cross-functional team through a full platform modernization ? making architectural calls across backend APIs, database design, CI/CD infrastructure, and frontend delivery ? the kind of 0?1 ownership that A.Team missions demand. I've also worked hands-on with vector databases and RAG architectures as part of integrating LLM-backed features into existing production systems, giving me a practical foundation in the AI stack that's increasingly central to enterprise builds.

My preferred stack ? Rails and Python on the backend, React on the frontend, AWS for infrastructure, Elasticsearch and vector DBs for retrieval, and LangGraph for orchestration ? maps directly to the kinds of missions in your network. I'm comfortable operating without hand-holding: scoping ambiguous problems, proposing technical direction to founders and CTOs, and then executing with a small, senior team. That combination of architectural thinking and deep implementation experience is where I've consistently created the most impact.

I'd welcome the chance to go through A.Team's evaluation process and show concretely what I've built. I'm ready to move quickly and am genuinely excited about the caliber of peers and projects in this network.
