Re: Senior Independent Software Developer - A.Team

A·Team's model resonates with exactly what I've been looking for as a senior independent builder ? meaningful, high-impact work with audacious companies, without the noise of chasing down unreliable clients or settling for shallow engagements. The opportunity to contribute to missions backed by a16z, YC, and Softbank, as part of a curated network of top-tier engineers, is precisely the kind of environment where I do my best work.

Over the past decade, I've operated as a staff-level full-stack engineer owning features end-to-end ? from database schema design and backend APIs in Ruby on Rails to performant frontend experiences in React and EmberJS. At STG Labs / Onclusive India, I led development on large-scale media intelligence infrastructure, building and tuning Elasticsearch-powered search and analytics pipelines that processed millions of documents in near real-time ? directly improving query performance and system reliability at scale. Earlier at Reflektive Labs, I drove critical product initiatives across a full SaaS performance management platform, shipping across the entire stack while introducing TDD practices and clean architecture patterns that meaningfully reduced defect rates and accelerated the team's delivery cadence.

Beyond the code, I've consistently bridged the gap between engineering and product ? aligning technical decisions with business outcomes, mentoring teammates, and setting up CI/CD pipelines with GitHub Actions and Docker that tightened deployment cycles. My experience spans MySQL, PostgreSQL, Redis, Sidekiq, Terraform, and observability tooling like New Relic and AppSignal, and I'm actively deepening my work in distributed systems, RAG pipelines, and vector databases ? areas where I'm eager to contribute to forward-thinking product teams.

I'd welcome the chance to connect with the A·Team community and explore missions where this background can create real impact. I'm ready to move quickly through any vetting process and excited about what's possible from here.
