Re: Tech Lead Full-Stack Rails Engineer - Mitre Media

Mitre Media's mission to bring AI-powered financial intelligence to millions of investors through platforms like Dividend.com and MutualFunds.com is exactly the kind of high-impact, technically ambitious work I've been building toward. The combination of LLM integration, a lean entrepreneurial team, and a Rails 8 microservices architecture speaks directly to where my skills and interests converge ? and the opportunity to report to the CTO and genuinely shape system architecture is one I'd take seriously.

Over the past decade as a staff-level full-stack engineer, I've owned features end-to-end across the full Rails stack, from database schema design and API architecture through to frontend delivery. At STG Labs / Onclusive, I built and maintained large-scale SaaS platforms leveraging Ruby on Rails, Elasticsearch, MySQL, Redis, and Sidekiq ? systems that processed high volumes of real-time data under production load. I've also driven meaningful frontend work using React, EmberJS, and Stimulus, so I can move fluidly across the stack rather than handing off at an artificial boundary. Performance tuning and scalable architecture aren't afterthoughts for me ? at Reflektive Labs, I led optimizations that measurably reduced query latency and improved throughput across distributed services, directly improving user experience at scale.

What sets this role apart for me is the LLM integration mandate. I've been actively working with RAG pipelines, vector databases, and LangGraph-based workflows, exploring how LLMs can power stateful, context-aware user experiences ? precisely the pattern Mitre Media is building toward. My familiarity with distributed systems, Elasticsearch as a semantic retrieval layer, and CI/CD pipelines via GitHub Actions and Docker means I can integrate these AI components into your microservices architecture without slowing down delivery. I've also mentored engineers and aligned technical decisions with product goals throughout my time as Tech Lead at L&T Technology Services, so I understand what it means to hold both the architectural vision and the hands-on execution simultaneously.

I'd welcome the chance to talk through how my background maps to what your CTO is looking to build. I'm ready to contribute immediately and am genuinely excited about the scale of impact Mitre Media's platforms have on real investors making real financial decisions.
