SUMMARY

Senior independent full-stack engineer with 10+ years of experience building and scaling high-impact SaaS platforms for audacious, high-growth companies — exactly the kind of meaningful missions A·Team is known for. Deep hands-on expertise across distributed systems, Ruby on Rails, React, Elasticsearch, Python, and AWS, with a proven track record of owning complex initiatives end-to-end, from architecture through production. Thrives in small, high-trust product teams, bringing both senior technical depth and the autonomy-driven, client-focused mindset that A·Team's independent builder model demands.

SKILLS

Ruby on Rails, React, JavaScript (ES6), Python, Distributed Systems, Elasticsearch, AWS, RDBMS (MySQL / PostgreSQL), jQuery, Vue.js / ViewJS, RAG (Retrieval-Augmented Generation), Vector Databases, LangGraph, Redis, Sidekiq, EmberJS, Stimulus, Ruby, RSpec, HTML5, CSS3, HAML, SASS, Git, GitHub, GitHub Actions, Docker, Terraform, CI/CD, AppSignal, New Relic, Agile/Scrum, Test-Driven Development (TDD), Scalable Architecture, Performance Tuning, Clean Code

EXPERIENCE

Senior Software Engineer — STG Labs / Onclusive India Mar 2022 – Present

- Architected and scaled a high-growth SaaS platform for PR monitoring serving enterprise clients, built on distributed systems principles using Ruby on Rails, MySQL, and Elasticsearch — delivering consistent, high-quality engineering on one of the company's most critical initiatives.
- Owned end-to-end delivery of frontend dashboards and real-time data visualizations using React and JavaScript, enabling clients to analyze PR metrics, articles, and trends at scale with measurable impact on user engagement.
- Drove a full Elasticsearch migration from v5 to v7 across a distributed data pipeline, improving search performance, scalability, and system reliability for high-volume production workloads.
- Implemented intelligent article categorization by topic leveraging Elasticsearch query optimization, reducing search latency by 15% and improving content discovery for end users.
- Expanded platform reach by integrating YouTube and podcast media sources, broadening the data ecosystem and delivering high-impact product features aligned with client growth goals.
- Optimized API payloads and client-side rendering for large datasets, significantly improving frontend performance and usability — the kind of cross-stack ownership A·Team's high-growth clients value.
- Designed and implemented CI/CD pipelines using GitHub Actions and Docker, enabling faster, lower-risk deployments and improving developer productivity across distributed engineering teams.
- Collaborated directly with product and customer success stakeholders to resolve complex escalations and shape long-term platform architecture, demonstrating the senior judgment and autonomy expected on independent builder teams.

Tech Lead — L&T; Technology Services Jan 2020 – Mar 2022

- Led a cross-functional team of 6+ senior and mid-level engineers, driving high-impact delivery across distributed squads while mentoring builders and influencing long-term technical strategy and roadmap prioritization.
- Owned end-to-end delivery of user-facing reporting modules, spanning frontend behavior, RESTful API design, and backend data aggregation — ensuring performance, scalability, and usability for production clients.
- Proposed and independently built a Detailed Report feature that cut reporting delays by 20%, demonstrating the initiative and ownership mindset that defines top independent contributors.
- Produced HLD/LLD architecture documentation and technical deliverables, ensuring engineering decisions were well-reasoned, communicated clearly, and aligned with business goals.
- Facilitated Agile sprint planning, backlog grooming, and team unblock sessions, keeping high-growth delivery on track across parallel workstreams.

- Received two Best Employee Awards for delivery ownership, innovation, and consistent high-quality output across mission-critical projects.

SDE II — Reflektive Labs Pvt Ltd Aug 2019 – Jan 2022

- Enhanced platform monitoring and Redis-backed distributed search functionality, achieving a 10% performance gain on high-traffic production workloads.
- Mentored junior engineers through design reviews, pair programming, and onboarding, building a strong engineering culture and raising the bar for code quality and technical standards across the team.

Consultant — Ciber (Philips account) Jul 2018 – Jul 2019

- Migrated a Lucene-based search system to PostgreSQL full-text search (RDBMS), increasing query precision and simplifying the distributed search architecture for a large enterprise client.
- Built a custom SQL query layer for dynamic report generation, enabling flexible, high-performance data retrieval tailored to complex client reporting requirements.
